-In-1 HPV Vaccine 合1子宮頸癌疫苗

HPV includes over 150 genotypes, with around 40 affecting human genitals and causing diseases. It can be contracted by sexually active individuals and may initially be asymptomatic, but the immune system can clear mild infections. However, persistent infection has the potential to induce cellular abnormalities that can advance into cancer.

HPV人類乳頭瘤病毒有150種類型，其中約40種會感染人類生殖器官引起不同病症。感染常見於有性生活的男性和女性，可能無症狀，並可能被免疫系統自行清除。然而，反覆感染可以導致細胞病變，最終演變成癌症。

9-In-1 HPV Vaccine 9價子宮頸癌疫苗

HPV is composed of various genotypes. HPV vaccine, commonly referred to as the cervical cancer vaccine, is available in two varieties: 4-in-1 and 9-in-1. The former can shield against four different strains of HPV while the latter can provide protection against 9 common type of HPV that include HPV 6,11 low risk type and 16, 18, 31, 33, 45, 52 & 58 high risk type.

HPV類型繁多，HPV疫苗（即子宮頸癌疫苗）可以分為4合1疫苗及9合1疫苗，而HPV 9合1疫苗可以預防9種常見HPV類型，包括HPV 6、11低危型及16、18、31、33、45、52、58高危型。

Reduce the risk of
cervical cancer and
other cancers
降低患子宮頸癌及其他
癌症的風險

90%
